ESITECH, Inc. Redefines Detention Security with Launch of "Overwatch" Integrated Control System

Richmond, VA — **ESITECH, Inc.** is proud to announce the official launch of **Overwatch**, a premier integrated detention security control system designed to set the new industry standard for safety, reliability, and comprehensive facility management. Developed to meet the rigorous demands of modern correctional environments, Overwatch represents a leap forward in unified security technology.

In a field where split-second coordination is vital, Overwatch provides a centralized "brain" for facility operations. The system seamlessly integrates the most critical components of detention infrastructure, including:

- **Advanced Detention and Access Control:** Secure, high-precision management of all entry and exit points. Detention Door Controls, Emergency Release, Interlocking and movement controls.

- **Comprehensive Video Management:** State-of-the-art surveillance integration for total situational awareness. Multiple live camera views per event capture every angle.

- **Intercommunication Systems:** Reliable, crystal-clear audio pathways for staff and housing units.

- **Building and Perimeter Automation:** Full-scale automation bridges the gap between internal building systems and external perimeter security.

"Overwatch by ESITECH is more than just a software update; it is a commitment to the idea that if a security solution can be imagined, it can be accomplished," said a representative from ESITECH, Inc. "By utilizing the best in integrated technology, we are giving facilities the tools to operate with unprecedented confidence and efficiency".

Overwatch is engineered to eliminate the risks associated with fragmented, "siloed" security systems. By bringing every sensor, camera, and lock under a single, intuitive interface, ESITECH ensures that correctional professionals can focus on their most important task: maintaining a secure environment.

About ESITECH, Inc.

ESITECH, Inc. is a leading innovator in integrated security solutions, specializing in the design and implementation of control systems for high-security environments. With a focus on cutting-edge engineering and user-centric design, ESITECH continues to lead the way in protecting people and property.
